	<p>TERMS OF REFERENCE</p> <p>I. Project Title: Supply, Delivery, Installation, and Commissioning of two (2) units of 640 Dual View X-ray Machine at the Main Building</p> <p>II. Description of the Project:</p> <p>This project aims to install Electronic Security Equipment at the Main Building of PICC to ensure that hand-carry bags and baggage of guests/clients are correctly screened before the items can enter the facility.</p> <p>The requirement is for a new multi-energy X-ray system for suitcases, baggage, and parcel inspection that will help the operator identify organic materials (including explosives and drugs), weapons, detonators, and dangerous items that could be a security risk.</p> <p>The system must be designed to avoid significant damage to food, films, and medicines and is also guaranteed to protect operators against x-rays, be easy and safe to use, and need minimal service.</p> <p>The machine must have a dual view, allowing the vision of the luggage to be in two different positions to help the operator identify and prevent the introduction of restricted materials, including explosives, weapons, drugs, and other prohibited materials.</p> <p>The machine should display on the screen the different materials constituting the contents of the subject, following a chromatic code: organic materials in orange, metals in blue, other inorganic materials in green, and non-penetrable materials in black. An alarm for high-density materials must be represented through color rendering, e.g., red or yellow.</p> <p>The image should be created “on the fly,” regardless of bag length.</p> <p>III. Project Scope:</p> <p>Supply, Delivery, Installation, and Commissioning of two (2) units of Baggage X-Ray Machines. The winning bidder is to supply, deliver, and install two (2) units of 60x40 (cm) dual-view X-ray machines, following the prescribed technical specifications of the equipment.</p>	

Technical Specification: Major/Core parts of the System:

1. The X-ray Machine Unit – should be made up by:

- a. A tunnel contains the x-ray generator, power and image management electronics, and two sets of photodiode arrays. At both edges of the tunnel are anti-X lead double-layer rubber bands (curtains) to guarantee maximum protection against ionizing radiation.
- b. Bi-directional conveyor belt, inverter controlled, having a belt speed of 0.2 m/s.
- c. High-frequency X-ray generator, integrated with a low filtration X-ray tube in a lead container. The X-ray generator holder is complete with a forced ventilation system integrated into the container to guarantee the continuous operation of the generator.
- d. Two sets of low-noise photodiode arrays to collect information carried by x-rays.
- e. Emergency stop buttons to halt x-ray emission and belt movement in case of danger. Two or more emergency stop buttons are on the machine's body, and one is on the operator console panel (OCP).
- f. A computer under the tunnel to acquire and process the images. The innovative operating system grants a friendly human-machine interface, multitasking capabilities, and network connectivity. The system has multi-level access using various user IDs and passwords to match different privilege levels.

2. The Control Unit – should be made up of the following:

- a. Ergonomic operator console to control the system's power on/off, belt movement, image post-processing & minimum 4-port USB hub to connect external devices.
- b. Two high-resolution, **minimum 27" LCD monitors** to display B/W or color images of the two views.
- c. A workstation table for the operator with built-in metallic support positioned under the table for ready, clean, and concealed fastening of metal flex console cables of the x-ray machine. Minimum dimension of table: **1000mm (L) x 720mm (W) x 800mm (H)**.
- d. System console cable with a minimum length of 4m.
- e. An ergonomic chair.

General Technical Features of the System

The machine should be multi-energy and dual view designed to identify organic (including explosives and drugs), metals, and amorphous materials in quantities more significant than the minimum threshold and according to the type of material by pre-defined chromatic code.
